Belgium National– Summary text

In Belgium, electricity from renewable sources is promoted mainly through a quota system based on the trade of certificates. In general, renewable energy is a regional matter; only offshore wind power is governed by national regulations. As far as the national promotion of heat and cooling is concerned companies are eligible for a tax deduction on investment costs. Transport is a matter of federal competence in Belgium as well. The main support scheme for renewable energy sources used in transport is a quota system.

In Belgium electricity from renewable energy sources is given priority in both connection to and use of the grid. The grid users are not entitled to the expansion of the grid.

Several policies aim at promoting the development, installation and usage of RES-installations on the federal level in Belgium including training programmes for RES-installers, certification schemes as well as an indirect fiscal mechanism for research, development and demonstration (RD&D) programmes. Moreover, the exemplary role of public authorities is ensured through a public energy service company in charge of achieving and financing energy saving projects in public federal buildings.

RES-E support schemes

Summary of support schemes

Overview	<p>In Belgium, electricity from renewable sources is promoted mainly through a quota system based on the trade of certificates. In general, renewable energy is a regional matter; only offshore wind power is governed by national regulations. The federal grid operator shall meet public obligations, which include the purchase of green certificates at a minimum price set by law for certain renewable electricity generation technologies. As described below, every region (Wallonia, Flanders, Brussels Capital) has its own standards of support for renewable energy, based on a national framework. Electricity suppliers are obliged to present green certificates to prove that a certain proportion (quota) of the electricity supplied to their final consumers in Belgium was generated from renewable sources. This quota may differ according to the region.</p> <p>Please note: As in Belgium the competences are distributed between the national and the regional authorities, the information on Belgium presented on this website will comprise both national support schemes and regional schemes in Flanders, Wallonia and Brussels Capital.</p>
Support Schemes	<ul style="list-style-type: none">• Quota system. In Belgium, renewable electricity generation is promoted through a quota system based on quota obligations. Electricity suppliers are obliged to prove, by submitting certificates, that a certain statutory and continuously increasing proportion (quota) of the electricity they supply was generated from renewable sources. The minimum price per certificate is guaranteed by statutory law.•
Technologies	In general, all renewable electricity generation technologies are eligible for support.
Statutory provisions	<ul style="list-style-type: none">• Loi du 29 avril 1999 (Loi relative à l'organisation du marché de l'électricité – Law of 29 April 1999 on the Organisation of the Electricity Market)• Arrêté royal du 16 juillet 2002 (Arrêté royal relatif à l'établissement de mécanismes visant la promotion

Basic information on legal sources

Name of legal source (original language)	Loi du 29 avril 1999 relative à l'organisation du marché de l'électricité / Wet betreffende de organisatie van de elektriciteitsmarkt van 29 April 1999.	Arrêté royal du 16 juillet 2002 relatif à l'établissement de mécanismes visant la promotion de l'électricité produite à partir des sources d'énergie renouvelables / Koninklijk besluit betreffende de instelling van mechanismen voor de bevordering van elektriciteit opgewekt uit hernieuwbare energiebronnen van 16 Juli 2002	
Full name			
Name (English)	Law of 29 April 1999 on the Organisation of the Electricity Market	Royal Decree of 16 July 2002 on the Introduction of Mechanisms Promoting Renewable Energy Generation	
Abbreviated form	Loi du 29 avril 1999	Arrêté royal du 16 juillet 2002	
Entry into force	02.06.1999	01.07.2003	
Last amended on	28.12.2012	16.01.2013	

Future amendments			
Purpose	The law establishes a general framework for the energy market and also applies to renewable energy.	The decree promotes renewable energy only. This decree is based on Art. 7 of Loi relative à l'organisation du marché de l'électricité.	
Relevance for renewable energy	This law constitutes a part of the legal basis for special regulations for the promotion of renewable energy with regard to the trade of certificates as well as grid connection of and priority access for renewable energy.	This decree promotes renewable energy only.

Support schemesQuota system (Green Certificates)

Abbreviated form of legal source(s)	<ul style="list-style-type: none">• Arrêté royal du 16 juillet 2002• Loi du 29 avril 1999	
Contact Authority	Federal Regulatory Authority (CREG)	
Summary	<p>In Belgium, the main means of support is a quota system based on quota obligations and tradable certificates. The trade of certificates is subject to federal legislation, while the quota obligations are defined in regional regulations. Electricity suppliers shall present evidence that they have supplied a certain quota of renewable energy determined by the region (Wallonia, Flanders, and Brussels Capital) to their final consumers. To this aim, electricity suppliers are obliged to acquire green certificates (certificats verts/groenestroomcertificaten). The Federal Electricity Regulatory Authority (CREG) issues one certificate per MWh of offshore electricity (Art. 7 § 3, Arrêté royal du 16 juillet 2002).</p> <p>Moreover, the federal grid operator used to be obliged to purchase green certificates from electricity generators at the minimum price. Since the energy issues are regional competence, this obligation has been limited to certain renewable energy technologies (Art. 14, Arrêté royal du 16 juillet 2002). These technologies are offshore wind energy, solar energy and hydro-power.</p>	
Eligible technologies	General information	<p>In general, all renewable electricity generation technologies are eligible to participate in the quota scheme in Belgium. However, only renewable electricity generation from offshore wind energy, solar energy and hydro-power technologies fulfilling certain conditions can benefit from the purchase obligation of the federal grid operator. Green certificates are issued under the following conditions:</p> <ul style="list-style-type: none">• Plant operators shall be authorised to produce electricity from renewable energy sources. A plant operator is deemed authorised only if he has been issued a certificate of origin

		(garantie d'origine/oorsprongsgarantie) by the competent regional or federal authority (Art. 4 of Arrêté royal du 16 juillet 2002). <ul style="list-style-type: none">In addition to this, the operators of plants that generate electricity from waves, tidal flows or wind power in Belgian waters need to be licensed by the responsible ministry (Art. 6 of Loi du 29 avril 1999).
	Wind energy	Onshore wind energy is only eligible for the regional green certificate scheme. Off-shore wind energy is eligible for federal schemes only (Art. 14, Arrêté royal du 16 juillet 2002).
	Solar energy	Eligible for the regional green certificate scheme. Only solar energy installations commissioned before 1 August 2012 can still benefit from the federal purchase obligation of green certificates (Art. 14, Arrêté royal du 16 juillet 2002).
	Geothermal energy	Only eligible for the regional green certificate scheme.
	Biogas	Only eligible for the regional green certificate scheme.
	Hydro-power	Eligible for the regional green certificate scheme. Hydro-power installations situated on state-owned concessions can also benefit from the federal purchase obligation of green certificates (Art. 14, Arrêté royal du 16 juillet 2002).
	Biomass	Only eligible for the regional green certificate scheme.
Amount	Amount of quota and period of application	The green certificates allocated to offshore plants by the federal regulatory authority have a validity of five years (Art. 13, §2 Arrêté royal du 16 juillet 2002).

	Adjustment of quotas	
	Number of certificates according to technology	The federal electricity regulatory authority (CREG) issues one certificate per MWh of offshore electricity (Art. 7 § 3, Arrêté royal du 16 juillet 2002).
	Minimum price per certificate	<p>The minimum prices green certificates under the federal purchase obligation are as follows (Art. 14 Arreté du 16 juillet 2002):</p> <ul style="list-style-type: none">• Off-shore wind power stations: €107 per MWh for electricity generated resulting from first 216 MW of installed capacity, € 90 per MWh for electricity produced from an installed capacity exceeding the first 216 MW• Solar energy installations commissioned before 1 August 2012: €150 per MWh• Hydro-electric power stations: €20 per MWh
	Fees and penalty charges	There are no penalty charges concerning the green certificates of the federal authority. However, there is a system of penalty charges on the regional level for Flanders, Walloon and Brussels.
	Yearly Average Certificate Price	
Eligibility Period	The federal system operator is obliged to buy the green certificates of the renewable energy plants eligible to the federal purchase obligation for a period of 10 years from the commissioning of the plant. This obligation amounts to 20 years for offshore wind plants (Art. 14 Arreté du 16 juillet 2002).	
International applicability	International certificate trade	
	Flexibility Mechanism	

Addressees	Entitled party. The entitled party is not explicitly specified. Obligated party. All electricity suppliers are obliged to satisfy the regional quota obligations.	
Procedure	Process flow	<ul style="list-style-type: none">The operators of offshore wind plants shall apply to the federal electricity regulatory authority (CREG) to acquire green certificates. Certificates of origin shall be submitted together with their applications (Art. 8 Arreté du 16 juillet 2002).The regulatory authority shall assess applications and, if required, request missing documents and data from the applicants within 15 days (Art. 9 Arreté du 16 juillet 2002).The regulatory authority shall communicate to the applicant whether or not green certificates will be issued within one month after receipt of a complete application (Art. 10 Arreté du 16 juillet 2002).
	Competent authority	The federal electricity regulatory authority (CREG) is responsible for allocating green certificates to offshore wind plants. To ensure the authenticity of these certificates, they are registered in a data base managed by CREG (Art. 13 Arreté du 16 juillet 2002).
Distribution of costs	State	
	Consumers	The costs arising from the quota system are borne by the consumers (Art. 14 bis Arreté du 16 juillet 2002).
	Plant operator	
	Grid operator	

European Union	
Distribution mechanism	<ul style="list-style-type: none">• Plant Operator – Transmission System Operator (TSO): The TSO (federal system operator) is obliged to buy the green certificates from the eligible RE-producer at the fixed minimum price (Art. 14 Arrêté du 16 juillet 2002).• TSO – Access holders / Distribution System Operator (DSO): The TSO forwards the surcharge of the green certificates (difference between the purchase cost of the green certificates and their gains on the market) to the access holders as well as to the DSOs (Art. 14 bis Arreté du 16 juillet 2002).• DSO – Final consumers: The surcharge of the green certificates is passed on to the consumers as described in the general legislation on energy (Art. 14 bis Arreté du 16 juillet 2002).

RES-LEGAL EUROPE – National Profile Belgium

RES-E Grid issues

Overview

Overview of grid issues	In Belgium, access of electricity from renewable energy sources is basically regulated by the general legislation on energy. Electricity from renewable energy sources is given priority in both connection to and use of the grid. The grid users are not entitled to the expansion of the grid.
Connection to the grid	Plant operators are contractually entitled against the grid operator to the connection of a plant to the grid. The latter is obliged to enter into these contracts. The grid operator shall preferably choose as his contractual partners the operators of renewable energy plants.
Use of the grid	A given plant operator has the right to access the grid and that his electricity be purchased if his plant is connected to the grid.
Grid expansion	Plant operators are not entitled to the expansion of the grid. The grid operator is obliged to draft a development plan for the grid in cooperation with the "Direction générale de l'Energie" and the "Bureau fédéral du Plan".
Statutory provisions	<ul style="list-style-type: none">• Loi du 29 avril 1999 (Loi du 29 avril 1999 relative à l'organisation du marché de l'électricité - Law of 29 April 1999 on the Organisation of the Electricity Market)• Arrêté royal du 19 décembre 2002 (Arrêté royal du 19 décembre 2002 établissant un règlement technique pour la gestion du réseau de transport de l'électricité et l'accès à celui-ci – Royal Decree of 19 December 2002 Establishing Technical Regulations for the Management of the Electricity Transmission Grid)• Loi du 15 décembre 2009 (Loi du 15 décembre 2009 portant confirmation de divers arrêtés royaux pris en vertu de la loi du 29 avril 1999 relative à l'organisation du marché de l'électricité et de la loi du 12 avril 1965 relative au transport de produits gazeux et autres par canalisations – Law of 15 December 2009 Confirming Several Royal Decrees Related to the Law of 29 April 2009 on the Organisation of the Electricity Market)• Arrêté royal du 2 septembre 2008 (Arrêté royal du 2 septembre 2008 relatif aux règles en matière de fixation et de

	<p>contrôle du revenu total et de la marge bénéficiaire équitable, de la structure tarifaire générale, du solde entre les coûts et les recettes et des principes de base et procédures en matière de proposition et d'approbation des tarifs, du rapport et de la maîtrise des coûts par les gestionnaires des réseaux de distribution d'électricité – Decree of 2 September 2008 Establishing Regulations to Determine the Distribution Grid Operators' Total Income and the Principles and Procedures for the Calculation and Authorisation of their Export Charges).</p> <ul style="list-style-type: none">• Loi du 8 janvier 2012 (Loi du 8 janvier 2012 portant modifications de la loi du 29 avril 1999 relative à l'organisation du marché de l'électricité et de la loi du 12 avril 1965 relative au transport de produits gazeux et autres par canalisations - Law of the 8 January 2012 modifying the Law of the 29 April 1999 on the Organisation of the Electricity Market as well as the Law of 12 April 1965 on the transport of gas products through gas mains)

Purpose	This decree introduced the export charges for the operators of renewable energy plants. Art. 41 of the decree is currently not applicable due to a decision by the supreme court.	This Law implements the third European energy package. It addresses the ownership of the unbundling process, the reinforcing of competences of the federal regulator and the promotion of renewable energy.	
Relevance for renewable energy		This Law also partially implements the Directive 2009/28/EC on the promotion of the use of energy from renewable sources and thus reinforces the priority of electricity from renewable energy sources.

Grid issues

Connection to the grid

Abbreviated form of legal sources	Arrêté du 19 décembre 2002	
Contact Authority	Elia – transmission grid operator	
Overview	<p>Plant operators are contractually entitled to be connected to the grid by the grid operator. The grid operator is obliged to enter into these agreements. The essential contents of such an agreement are defined by law (Art. 112 Arrêté du 19 décembre 2002). Prior to entering into an agreement, the grid user shall submit an application for connection (demande de raccordement) to the grid operator. The claim for grid connection arises at the date of the conclusion of the agreement.</p> <p>Every plant operator or grid user that meets the technical conditions of a so-called "utilisateur du réseau" is entitled to connection (Art. 45-78 Arrêté du 19 décembre 2002).</p> <p>The obligated party is the grid operator (Art. 3-9 Arrêté du 19 décembre 2002).</p>	
Procedure	Process flow	<p>The distribution grid operator operates on the national level on grids with a voltage of 150 kV to 380 kV. The following procedure applies therefore to all regions:</p> <ul style="list-style-type: none">First, the generator applies to the grid operator for connection. Art. 95 of Arrêté du 19 décembre 2002 sets out the information to be provided in the application.After receipt of a complete application, the grid operator conducts a thorough examination to present technical solutions for the connection of the plant to the grid. The applicant is obliged to bear the costs of this examination (Art. 95, 5° Arrêté du 19 décembre 2002).The operators of onshore plants that have a capacity of at least 25 MW shall apply to the Ministry for Energy for a generation licence. The operators of onshore plants with a capacity of less than 25 MW only need to register their

		<p>plants with the Ministry for Energy.</p> <ul style="list-style-type: none">After an applicant has accepted the technical solution proposed by the grid operator, a grid connection agreement is concluded. <p>Prior to submitting an application for connection, a plant operator may request the grid operator to conduct a benchmark study (Art. 79 Arrêté du 19 décembre 2002). This benchmark study shall include a cost estimate for connection (Art. 88 and 80 Arrêté du 19 décembre 2002). The costs of the benchmark study shall be borne by the applicant. Where technically feasible, the grid operator is obliged to give priority to renewable energy plants with a capacity of up to 25 MW when conducting benchmark studies or processing applications for connection (Art. 79 and 100 Arrêté du 19 décembre 2002).</p>
	Deadlines	<p>The date of connection to the grid depends on the terms of the agreement.</p> <ul style="list-style-type: none">Where an application for a benchmark study has been accepted, the grid operator shall present the results of the study within 40 working days (Art. 87 Arrêté du 19 décembre 2002).The grid operator is obliged to examine an application and inform the plant operator of missing documents and information within 10 days from the receipt of the application (Art. 97 Arrêté du 19 décembre 2002).The grid operator and the plant operator are obliged to reach an agreement on the technical solution for connection within 60 days as soon as the application is complete (Art. 105 Arrêté du 19 décembre 2002).The grid operator and the plant operator shall conclude a connection agreement within 60 days after having reached an agreement on the technical solution (Art. 109 in conjunction with Art. 107 Arrêté du 19 décembre 2002).
	Obligation to inform	

Priority to renewable energy (qualitative criteria)	<input checked="" type="checkbox"/> Priority to renewable energy <input type="checkbox"/> Non-discrimination	Renewable energy plants shall be granted priority connection unless grid security is at stake. This principle of priority shall be applied at all stages of the examination of a grid connection project (preliminary examination and application for connection, Arts. 79 § 2, 94 § 2, 100 § 8 of Arrêté du 19 décembre 2002).
Capacity limits (quantitative criteria)		
Distribution of costs	State	
	Consumers	
	Grid operator	
	Plant operator	The costs of grid connection are borne by the plant operator who submitted the application for connection. The costs arising from the mandatory examinations, the preliminary examination and the examination of the grid connection project are borne by the plant operator. They are deducted from the costs of grid connection.
	European Union	
	Distribution mechanism	

Use of the grid

Abbreviated form of legal sources	<ul style="list-style-type: none">• Arrêté du 19 décembre 2002• Loi du 29 avril 1999	
Contact Authority	Elia – transmission grid operator	
Overview	<p>The plant operators are contractually entitled against the grid operator to use the grid. The grid operator is obliged to enter into agreements according to non-discriminatory criteria. The claim for use of the grid arises at the date of the conclusion of the agreement. The grid use agreement defines the rights and obligations of the grid operator and the plant operator. It also includes provisions on access and connection charges. Applications for access (examen de la demande d'accès/Onderzoek van de toegangsaanvraag) are also assessed with regard to the available grid capacity (Art. 168 no. 2 Arrêté du 19 décembre 2002). The grid operator may deny the use of the grid if grid capacity is insufficient (Art. 170 (§ 1) Arrêté du 19 décembre 2002 in conjunction with Art. 15 § 1 Loi du 29 avril 1999). The grid capacity available to an individual plant operator is stipulated in the agreement.</p> <p>The transmission grid operator is allowed to refuse the access to the grid to grid connected installations if he does not dispose of the required grid capacity or if the grid access could hinder the good functioning of the grid (Art. 15 §1 Loi du 29 avril 1999). The transmission grid operator engages itself to notify and to justify its refusal to the federal regulatory authority CREG (Art. 15 §1 Loi du 29 avril 1999).</p> <p>Entitled party. The entitled parties are those plant operators that have entered into a connection agreement (Art. 163 Arrêté du 19 décembre 2002).</p> <p>Obligated party. The grid operator is the obligated party as regards the access to the grid.</p>	
Procedure	Process flow	In order to be able to use the grid, a given plant operator (who has entered into a connection agreement) must apply for access (Art. 163 Arrêté du 19 décembre 2002). As stated by the grid operator, an agreement is valid only after it has been signed by the plant operator and if he has provided a bank guarantee. When applying for grid access, a given applicant shall appoint a person to be responsible for the security of the access points defined in the agreement ("responsable d'accès" or ARP - Access Responsible Party, Art. 172 Arrêté du 19 décembre 2002). Every plant

		<p>operator may register himself/herself as an ARP in the register of ARPs or appoint a third party to assume this responsibility on his/her behalf. To become an ARP, a plant operator (or third person) shall enter into an agreement (<i>contrat de responsable d'accès/ contract van toegangsverantwoordelijke</i>) whose contents are described by law (Art. 151 Arrêté du 19 décembre 2002).</p>
	Deadlines	<p>Deadlines concerning access may be specified in the grid use agreement. In contrast to this, deadlines regarding the procedure for concluding agreements are specified by statutory law.</p> <ul style="list-style-type: none">• The grid operator is obliged to examine an application and inform the plant operator of missing documents and information within 5 days from the receipt of the application (Art. 167 Arrêté du 19 décembre 2002).• The grid operator may reject an application within 12 days after receipt. The grid operator is obliged to give reasons for its decision (Art. 170 Arrêté du 19 décembre 2002).• The grid operator is obliged to submit an offer to the applicant within 15 working days (Art. 171 Arrêté du 19 décembre 2002).
	Obligation to inform	
Priority to renewable energy (qualitative criteria)	<input checked="" type="checkbox"/> Priority to renewable energy <input type="checkbox"/> Non-discrimination	Electricity from renewable sources must be given priority access and transmission unless the security of supply is at risk (Art. 268 § 1 of Arrêté du 19 décembre 2002 in conjunction with Art. 11 no. 3 of Loi du 29 avril 1999, Art 8. §1 no. 5 b of Loi du 29 avril 1999).
Curtailment	In general, the transmission grid operator is responsible for the minimisation of the curtailment of electricity from renewable energy sources (Art. 8 §1 no. 5c of Loi du 29 avril 1999).	

Distribution of costs	State	
	Consumers	In the end, the costs are borne by the consumers through their electricity bills (Art. 12 §11 of Loi du 29 avril 1999).
	Grid operator	
	Plant operator	
	European Union	
	Distribution mechanism	Every consumer is obliged to pay a fee, which depends on the amount of electricity consumed and is used to fund government activities related to the operation of the electricity grid and the regulation of the electricity market. This fee is collected by the grid operator. Electricity from renewable sources is exempt from certain elements of this fee (Art. 21 bis § 1 bis Loi du 29 avril 1999).

RES-T support schemes

Summary of support schemes

Overview	Transport is a matter of federal competence in Belgium. Therefore, there are no regional support schemes for the production of biofuels. The main support scheme for renewable energy sources used in transport is a quota system. This scheme obliges companies importing or producing petrol, gas or diesel fuels to ensure that biofuels make up a defined percentage of the company's total annual sale of fuel. Furthermore, biofuels are supported through tax regulations.
Summary of support schemes	<ul style="list-style-type: none">Tax regulation mechanism (Défiscalisation des biocarburants): The Budget Act of the 10 June 2006 introduces a reduction of the excise rate for the rate of biofuels contained in petrol and diesel products and produced by production units authorised by the Belgian Government.Tax regulation mechanism (Exemption d'accise pour l'huile de colza): Biofuel from rapeseed oil produced by a natural or legal person who directly sells its production to the end consumer without intermediary can be exempted from excise duty.Biofuel quota (obligation d'incorporation des biocarburants): The law of the 22 July 2009 obliges the registered oil companies producing petrol and diesel to fulfil a defined quota of biofuels per year.
Technologies	The tax regulation mechanism and the biofuels quota apply to biofuels only.
Statutory provisions	<ul style="list-style-type: none">Loi du 22 juillet 2009 (Loi du 22 juillet 2009 relative à l'obligation d'incorporation de biocarburant dans les carburants fossiles mis à la consommation - Law of 22 July 2009 regarding the blending obligation of biofuels into fossil fuels offered for consumption)Loi des Finances du 10 juin 2006 (Loi des Finances du 10 juin 2006 concernant les biocarburants - Budget Act of 10 June 2006 regarding biofuels).Loi-Programme du 27 décembre 2004 (Loi-Programme du 27 décembre 2004 - Framework legislation of 27 December 2004)

	<ul style="list-style-type: none">Arrêté royal du 10 Mars 2006 (Arrêté royal du 10 Mars 2006 en matière d'huile de colza utilisée comme carburant - Royal decree regarding the use of rapeseed oil as biofuel)

**Biofuel quota (obligation d'incorporation des biocarburants)**

Abbreviated form of legal source(s)	<ul style="list-style-type: none">• Loi du 22 juillet 2009	
Contact Authority	Federal Public Service Economy, SMEs, Self-Employed and Energy - Directorate-General for Energy	
Summary	The law of the 22 July 2009 obliges the registered oil companies producing petrol and diesel to fulfill a defined quota of biofuels per year (Art. 4 Loi du 22 juillet 2009).	
Eligible technologies	General information	Subject to the obligation are only biofuels. The blending of biofuels has to meet the requirements of the Belgian standards NBN EN 590 for diesel products and NBN EN 228 for petrol products (Art. 5 Loi du 22 juillet 2009).
	Biofuels	Considered as biofuels are fuels produced within the European Community which satisfy several sustainability requirements regarding the origin of the raw material, the CO2 emission reduction of the produced biofuels and the technical specifications laid down by the European Union (Art. 2 Loi du 22 juillet 2009).
	Electricity	
	Hydrogen	
Amount	Amount of quota and period of application	The providers of petrol or diesel fuels have to ensure that biofuels make up at least 4 % of the company's total annual sale of fuel. The obligation must be fulfilled by the end of each calendar year.

		<p>The following rates apply (Art. 4 Loi du 22 juillet 2009):</p> <ul style="list-style-type: none">• FAME (fatty acid methyl ester): at least 4% v/v of the diesel amount• Bioethanol or Bio-ETBE: at least 4% v/v of the petrol amount
	Adjustment of quotas	
	Fees and penalty charges	If a provider fails to fulfil the quota he shall pay a fine amounting to € 900 per 1,000 litres at 15°C of biofuels that was not blended with the annual amount of petrol or diesel products sold (Art. 10 Loi du 22 juillet 2009).
Addressees	The quota obligation applies to all registered oil companies offering petrol or diesel products for consumption. A registered company can be each natural or moral person who produces, buys, imports, refines, transforms, uses, distributes, sells, delivers or transports petrol or diesel products and offers them for consumption (Art. 2 and 4 Loi du 22 juillet 2009).	
Procedure	Process flow	The registered companies are obliged to communicate to the Directorate General for Energy the quantities of petrol and diesel products as well as their corresponding amount of biofuels produced within the last quarter. The figures shall be communicated at the latest until the last workday of the following month (Art. 6 §2 Loi du 22 juillet 2009).
	Competent authority	The Directorate General for Energy as well as the Directorate General for Control and Mediation are responsible for the verification of the blended amount of biofuel whereas the Directorate General for the

		Environment is responsible for verifying the sustainability of the incorporated biofuels (Art. 7 and 9 Loi du 22 juillet 2009).
Flexibility Mechanism		
Distribution of costs	State	
	Consumers	The costs are borne by the consumers.
	European Union	
	Others	
	Distribution mechanism	The obliged companies pass on the costs arising from the quota obligation to the consumers by adding a surcharge to their fuel.

Policies

Summary of policies

Overview	The following policies aim at promoting the development, installation and usage of RES-installations on the federal level in Belgium: There are training programmes for RES-installers, a certification scheme for heat pumps installations as well as an indirect fiscal mechanism for research, development and demonstration (RD&D) programmes. Moreover, the exemplary role of public authorities is ensured through a public energy service company in charge of achieving and financing energy saving projects in public federal buildings.
Summary of policies	<ul style="list-style-type: none">Concerning training programmes for installers, the non-profit association QUEST, the quality label Construction Quality (CoQual) and the Belgian Construction Certification Association (BCCA) have introduced a common procedure for quality-label application in the three Regions.As far as the certification programmes for RES installations are concerned, the organisation Quest for Quality delivers the European quality label EHPA on a national level for heat pumps installations.The Belgian Federal Government ensures the exemplary role of public authorities with the creation of Fedesco, a public energy service company in charge of achieving and financing energy saving projects in public federal buildings as third-party investor.Indirect fiscal subsidies exist for the research and development sector in the form of a partial exemption of 75% of the business tax for organisations active in the field of research and development.

**Policy categories****Training programmes for Installers**

Abbreviated form of legal source(s)	
Sector	Electricity Heating and Cooling
Contact Authority	Quest for Quality
Description	<p>In general, energy and thus certification of installers is a matter of regional competence and so far, no national training programme is in place. However, the non-profit association QUEST, the quality label Construction Quality (CoQual) and the Belgian Construction Certification Association (BCCA) have introduced a common procedure for quality-label application in the three Regions. Installers of photovoltaic installations as well as heat pumps can thus be certified according to the same criteria at national level.</p> <p>Moreover, an Energy Consultation Group called CONCERE-ENOVER was established in 1991, which gathers both the federal and the regional authorities and aims at harmonizing regulations at national level. In line with the requirements of European Directive 2009/28/EC a working group has been devoted since June 2010 to the issue of harmonisation of regulations for the certification of installers at national level. According to the Flemish ministry, the work of the CONCERE-ENOVER consultation group is not published.</p>
Addressees	Installers of photovoltaic installations and of heat pumps who are active in Belgium
Competent authority	The organisation Quest for Quality is responsible for delivering the quality labels for installers.

Certification Programmes for RES installations

Abbreviated form of legal source(s)	
Sector	Heating and Cooling
Contact Authority	Quest for Quality
Description	In general, energy and thus certification of RES installations is a matter of regional competence. However, an Energy Consultation Group called CONCERE-ENOVER was established in 1991, which gathers both the federal and the regional authorities and aims at harmonising regulations at national level. So far, no national certification programme is in place. The organisation Quest for Quality delivers the European quality label EHPA on national level for heat pumps installations. The quality label is granted after decision of the technical commission of Quest on the basis of the quality standards for heat pumps of Quest. The list of the labelled heat pumps is to be found on the website of Quest for Quality (see further information).
Addressees	All suppliers of heat pumps.
Competent authority	The organisation Quest for Quality is responsible for delivering the quality labels.

Exemplary role of public authorities in accordance with Art. 13 Abs, 5 RES Directive

Abbreviated form of legal source(s)	<ul style="list-style-type: none">Arrêté royal du 27 décembre 2004
Sector	Electricity Heating and Cooling
Contact Authority	Fedesco
Description	<p>The Belgian Federal Government created in 2005 a public energy service company called Fedesco, which is in charge of achieving and financing energy saving projects in public federal buildings as third-party investor (Art. 2 Arrêté royal du 27 décembre 2004). The Belgian State is a 100% shareholder of Fedesco. Among others, the company was given the mission of developing the use of photovoltaic panels on public buildings (Art. 2 bis Arrêté royal du 27 décembre 2004).</p> <p>The majority of the projects are sourced out to the private sector through calls for tenders. Fedesco directs and monitors the projects.</p>
Addressees	Any goods, services or construction company according to the Belgian legislation on Government procurements
Competent authority	The competent authority is Fedesco itself, which is a subsidiary company of the Belgian Federal Holding and Investment Company
