In Latvia, renewable electricity generation is stimulated through a complex support system based on a feed-in tariff, which also includes elements of a quota system and tenders. The existing feed-tariff is on hold until 01.01.2016 due to concerns about corruption and a lack of transparency in the way it was carried out since 2007. The existing state support mechanisms for energy production from renewable energy resources are being assessed and revised. Heating and cooling from renewable energy sources is promoted through several support schemes. These include different tax benefits as well as direct grant. The only incentive currently available for renewable energy sources in the transport sector is a tax regulation mechanism.

Access of renewable energy plants to the grid is subject to the general legislation on energy. Electricity from renewable sources is not given priority. Also devices for heat production from renewable energy sources are not given priority connection, and there is no special legislation promoting the connection of RES heating devices to the heat transmission network at the national level. There are regulations at the regional level that establish rules for and promote high energy performance and competition in the heat supply market.

There are two policies promoting the installation and use of RES installations.

RES-E support schemes

Summary of RES-E support schemes

Overview	In the Republic of Latvia, renewable electricity generation is stimulated through a complex support system based on a feed-in tariff. At the moment the existing feed-tariff is on hold until 01.01.2016.
Summary of support system	The Latvian government promotes the generation of electricity from renewable sources through a feed-in tariff, which also includes elements of a quota system and tenders. The Latvian government has decided that a certain percentage of the total energy consumption of all final consumers in Latvia shall be from renewable sources. This percentage varies according to the source of energy. The producers of electricity from certain energy sources are obliged to participate in tenders to obtain the right to sell electricity at a guaranteed price until a government-set cap is reached. Until 01.01.2016 feed-in tariff is closed for newcomers.
Technologies	In general, the feed-in tariff applies to all renewable electricity generation technologies except for geothermal generation.
Statutory provisions	<ul style="list-style-type: none">• Electricity Market Law (Elektroenerģijas tirgus likums, 82 115/0825/201105)• Energy Law (Enerģētikas likums, 273/275 04/04/2014)• Regulation No. 262 (Noteikumi par elektroenerģijas ražošanu, izmantojot atjaunojamos energoresursus, un cenu noteikšanas kārtību - Regulations Regarding the Production of Electricity Using Renewable Sources and the Procedures for the Determination of the Price)

Support schemes

Feed-in tariff

Abbreviated form of legal source(s)	<ul style="list-style-type: none"> Electricity Market Law Energy Law Regulation No. 262 	
Summary	<p>The feed-tariff is currently on hold until 01.01.2016.</p> <p>The Latvian government has set a certain percentage of final energy consumption that shall be from renewable sources. This percentage differs for every source of energy and was initially applicable until the end of 2010. The government has also set percentages for the following 10 years (§ 29 par. 2, 3 Electricity Market Law; no. 2 Regulation No. 262). According to the Ministry of Economy, electricity producers may apply for the right to sell electricity at a guaranteed price until the government-set cap is reached. The producers of electricity from certain energy sources are obliged to participate in a competition to obtain this right.</p>	
Eligible technologies	General information	In general, all renewable electricity generation technologies are eligible, except for geothermal generation. However, certain technologies are subject to output or capacity restrictions.
	Wind energy	Up to 3,500 full load hours per year are eligible (§ 29 par. 1 Electricity Market Law; no. 3.4., 3.5. 5.2 Regulation No. 262).
	Solar energy	Up to 8,000 full load hours per year are eligible (§ 29 par. 1 Electricity Market Law; no. 3.6, 5.3 Regulation No. 262).
	Geothermal energy	
	Biogas	Up to 8,000 full load hours per year are eligible (§ 29 par. 1 Electricity

		Market Law; no. 3.2, 5.3 Regulation No. 262).
	Hydro-power	Up to 5,000 h full load hours per year are eligible (§ 29 par. 1 and 7 Electricity Market Law; no. 3.1, 5.1 Regulation No. 262).
	Biomass	Up to 8,000 full load hours are eligible (§ 29 par. 1 Electricity Market Law; no. 3.3, 5.3 Regulation No. 262).
Amount	General information	The tariff bands for electricity from renewable sources are calculated according to formulas prescribed by the Public Utilities Commission. These formulas are based on the price of natural gas, the exchange rate between the Latvian Lat and the Euro, and a certain coefficient depending on the plant size (no. 37 Annex 8 Regulation No. 262). The factors on which the formulas are based vary according to the technology used.
	Wind energy	
	Solar energy	
	Geothermal energy	
	Biogas	
	Hydro-power	
	Biomass	
Degression	General information	As the tariff bands are linked to the price of natural gas and the exchange rate between the Lat and the Euro, they are subject to

		fluctuations (no. 37 Regulation No. 262).
	Wind energy	
	Solar energy	
	Geothermal energy	
	Biogas	
	Hydro-power	
	Biomass	
Cap	<p>The annual payment for a given plant ends when the plant has reached the number of full load hours specified for the generation technology employed. The following numbers of full load hours apply (no. 5.3 Regulation No. 262):</p> <ul style="list-style-type: none"> • wind energy: 3,500 full load hours per year, • solar energy: 8,000 full load hours per year, • biogas: 8,000 full load hours per year, • biomass: 8,000 full load hours per year, • hydro-electricity: 5,000 full load hours per year. 	
Eligibility period	<p>According to the Ministry of Economy, plant operators may sell all electricity at a guaranteed price once they have obtained the right to sell electricity.</p> <p>Solar installations. The tariff for solar installations is calculated according to a uniform formula and will apply for 20 years from the date of commencement of operation of power plants (no. 37.13 Regulation No. 262).</p> <p>Other plants. The tariff for all other systems decreases after a period of 10 years. The reduced tariff is paid for further 10 years (no. 37 Regulation No. 262).</p>	

<p>Addressees</p>	<p>Entitled party: The following entities may participate in the tenders for the right to sell electricity from renewable sources:</p> <ul style="list-style-type: none"> • sellers who own a plant (4.1 Regulation No. 262); • sellers who plan to upgrade a plant (4.2 Regulation No. 262); • sellers who plan to install a plant (4.3 Regulation No. 262). <p>The obligated person is the so-called public trader, who has certain statutory obligations (§§ 1 par. 2 no. 16; 33 par. 2 no. 3 Electricity Market Law).</p>	
<p>Procedure</p>	<p>Process flow</p>	<p>Plant operators must adhere to the following procedure to obtain the right to sell electricity: The operators of biomass, biogas, solar energy or wind energy plants must take part in tenders:</p> <p>Every year in October, the Ministry of Economy invites tenders to supply the amount of electricity necessary to meet the government's targets (no. 16, 17 Regulation No. 262).</p> <p>Eligible plant operators are required to submit an application to participate (no. 14 Regulation No. 262). The application requirements differ for every technology (no. 18-20 Regulation No. 262).</p> <p>A committee checks the applications against a published set of criteria (no. 28-34 Regulation No. 262).</p> <p>Successful tenderers will be notified by 31 November of the same year (no. 36 Regulation No. 262).</p> <p>Hydro-electricity:</p> <p>Plant operators shall apply to the Ministry of Economy for the right to participate in the sales system until the set amount is reached (no. 7 Regulation No. 262). The Ministry of Economy shall assess whether an application meets the requirements specified by law within one month after the application has been submitted (no. 10, 11</p>

		<p>Regulation No. 262).</p> <p>The Ministry of Economy assigns the above-mentioned right to those who meet all requirements (no. 12 Regulation No. 262).</p>
	Competent authority	<p>The Ministry of Economy monitors the producers and may revoke the right to sell in case of violation of the legal provisions (no. 47, 49 Regulation No. 262).</p>
Flexibility mechanism		
Distribution of costs	State	
	Consumers	<p>The costs are borne by all end users of electricity in proportion to their electricity consumption (no. 59 Regulation No. 262).</p>
	Plant operator	
	Grid operator	
	European Union	
	Distribution mechanism	<p>The regulatory authority determines the procedure according to which the costs of the support scheme are calculated and approves the costs incurred by the public trader (no. 59.1 Regulation No. 262).</p> <p>The electricity consumers pay electricity charges based on their level of consumption to the grid operator or directly to the public trader (no. 59.2, 59.3 Regulation No. 262).</p> <p>The grid operators pass the charges received on to the public trader (no. 59.1 Regulation No. 262).</p>

RES-E grid issues

Overview

Overview of grid issues	In Latvia, access of renewable energy plants to the grid is subject to the general legislation on energy. Electricity from renewable sources is not given priority. Thus, all plant operators are entitled against the grid operator to the connection of their plants to the grid and to the transmission of electricity according to the principle of non-discrimination. In pursuance of the general legislation, the grid operator is obligated to expand the grid. It is planned to open the electricity price zone of Latvia on 3 June 2013 in the Nordic electricity exchange "Nord Pool Spot".
Connection to the grid	The grid operator is obliged to the plant operator to connect plants as soon as they comply with the technical requirements. The costs of connecting a plant to the grid are borne by the plant operator.
Use of the grid	The grid operator is statutorily obligated to transmit via his grid the electricity generated and sold by the plant operators on the basis of non-discriminatory criteria. The costs of use of the grid are borne by the consumers.
Grid development	The grid operator is statutorily obliged to expand the grid within his area of responsibility. A plant operator is entitled to such an expansion only if the grid operator has agreed to do so by contract. The plant operator is obliged to bear the costs of the expansion.
Statutory provisions	<ul style="list-style-type: none">• Electricity Market Law (Elektroenerģijas tirgus likums)• Regulation No. 1/3 (Tīkla kodekss – Grid Code)• Regulation No. 280 (Sistēmas pieslēguma noteikumi elektroenerģijas ražotājiem – Regulation on the Connection of Electricity Producers)

RES-H&C support schemes

Summary of support schemes

Overview	In Latvia, heating and cooling from renewable energy sources is promoted through several support schemes. These include different tax benefits as well as direct grant from the Investment and Development Agency of Latvia (LIAA).
Summary of support schemes	<ul style="list-style-type: none">• Value Added Tax reduction. Companies who are supplying biomass and biogas shall pay a reduced VAT rate.• Excise Tax reduction. Biogas which is supplied to end-users shall be taxable; the tax rate is reduced if the biogas is used for heating.• Subsidy (Investment support to increase the district heating system efficiency). The investment support can be accorded from LIAA for the reconstruction and building of district heating plants.
Technologies	Support can be received for new CHP stations and the conversion of existing boilers into CHP stations using RES. Furthermore, biomass and biogas are eligible.
Statutory provisions	<ul style="list-style-type: none">• Law on Excise Duties (Par akcīzes nodokli)• Law on the Value Added Tax (Par pievienotās vērtības nodokli)• Regulation nr. 824 (Noteikumi par darbības programmas "Infrastruktūra un pakalpojumi" papildinājuma 3.5.2.1.1.apakšaktivitātes "Pasākumi centralizētās siltumapgādes sistēmu efektivitātes paaugstināšanai" projektu iesniegumu atlases otro kārtu un turpmākajām kārtām)

Tax regulation mechanism (Law on Excise Duties)

Abbreviated form of legal source(s)	<ul style="list-style-type: none"> Law on Excise Duties 	
Summary	<p>Natural gas which complies with the Combined Nomenclature Codes 2711 11 00 and 2711 21 00 and is supplied to end-users is subject to excise tax (§ 6 Law on Excise Duties). The tax rate is reduced if the biogas is used for heating (§ 15.1 Law on Excise Duties).</p>	
Eligible technologies	General information	Only biogas is subject to the tax allowance.
	Aerothermal	
	Hydrothermal	
	Biogas	Eligible
	Biomass	
	Geothermal energy	
	Solar Thermal	
Amount	<p>The amount of tax to be paid is reduced if the biogas is used for heating. The tax rate for the year 2012 is 12 Lats/1000 m³ (€ 17.06/ 1000 m³) (§ 15.¹ par. 1 Law on Excise Duties).</p>	
Addressees	<p>All persons or companies supplying natural gas which complies with the Combined Nomenclature Codes 2711 11 00 and 2711 21 00 to end-users are obliged to pay the tax (§ 6 Law on Excise Duties)</p>	

Procedure	Process flow	The obliged companies must inform the authorities on the amount of taxable energy products on a monthly basis (§ 23 Law on Excise Duties).
	Competent authority	State Revenue Service (§ 23, § 24 Law on Excise Duties)
Flexibility Mechanism		
Distribution of costs	State	The costs of tax relief are borne by the state.
	Consumers	
	Plant operator	
	Grid operator

Subsidy (Investment support to increase the district heating system efficiency)

Abbreviated form of legal source(s)	<ul style="list-style-type: none"> Regulation no. 824
-------------------------------------	--

Summary	Investment support is available for the (re)construction of infrastructure and technology of district heating plants in order to encourage the wider use of RES. Projects are supported in form of subsidies. and the maximum subsidy 50% of total costs is available for projects that have not previously used RES. The deadline for the fifth round is 31.07.2013.	
Eligible technologies	General information	The investment support is available for construction of district heating plants with a capacity < 3MW (§ 3 par. 11 Regulation no. 824)
	Aerothermal	
	Hydrothermal	
	Biogas	
	Biomass	
	Geothermal energy	
	Solar Thermal	
Amount	The maximum subsidy is 6 000 000 Lats (approximately € 9 m.) and must not exceed 40% of the total project costs. The maximum subsidy 50 % of the total costs are available for the plants, where prior to project implementation no renewable energy sources were used. (§ 4 par. 25 Regulation no. 824).	
Addressees	The provider of public services - a company which has a license for the production, distribution or transmission of heat (§ 2 par. 8 Regulation no. 824).	

Procedure	Process flow	The applicant submits an application for a subsidy. LIAA examines the application. This includes an inspection to determine whether an application complies with the qualitative and administrative criteria. The applications selected by the LIAA are presented to the Committee, which is appointed by LIAA, the Ministry of Economy and Ministry of Environmental Protection and Regional Development. The Committee shall decide which projects will receive funding.
	Competent authority	Investment and Development Agency of Latvia (LIAA) (§ 1 par. 5 Regulation no. 824).
Flexibility Mechanism		
Distribution of costs	State	The LIAA is partly funded from the state budget and partly from financial support received from the European Commission.
	Consumers	
	Plant operator	
	Grid operator	
	European Union	
	Distribution mechanism	

RES-H&C grid issues

Overview

Overview of grid issues	Devices for heat production from renewable energy sources are not given priority connection, and there is no special legislation promoting the connection of RES heating devices to the heat transmission network at the national level. However, heat suppliers and producers shall comply with economic and social law and the legislation on environmental protection and the preservation of cultural heritage. There are regulations at the regional level that establish rules for and promote high energy performance and competition in the heat supply market.
Connection to the grid	The heating network operator is obliged to purchase thermal energy from all heat producers, including independent producers. Agreements between a producer and the heating network operator shall be in line with the requirements set by law, especially with the requirements for the price of the thermal energy offered, the terms and conditions of payment, the costs of thermal energy transmission and compliance with the thermal energy generation regime. Moreover, the thermal energy offered shall comply with the technical requirements specified by the heating network operator.
Use of the grid

RES-T support schemes

Summary of support schemes

Overview	Both the “Biofuel Production and Use in Latvia (2003-2010)” programme and the state support programme “Aid for Biofuel Production” finished. The only instrument for the promotion of renewable energy sources in the transport sector currently available is a tax regulation mechanism. According to the Ministry of Finance, the Biofuel Development Advisory Council is currently discussing the introduction of a new support scheme.
Summary of support schemes	Tax regulation mechanism. Companies processing, holding, receiving or dispatching energy products are obliged to pay excise tax. This amount is reduced for fuels blended with biofuels.
Technologies	The tax regulation mechanism applies to biofuels only.
Statutory provisions	<ul style="list-style-type: none">• Law On Excise Duties (Par akcīzes nodokli)

Policies

Summary of policies

Overview	There are two policies promoting the development, installation and use of RES installations: the certification scheme for RES system installers and an obligation to use renewable heating and cooling systems in new and renovated buildings.
Summary of policies	<ul style="list-style-type: none">• Certification scheme. Natural persons must have a construction management certificate to carry out construction services. In order to obtain this certificate, at least intermediate vocational education is required, including training in the fields of RES heat supply and air conditioning system construction.• Building obligation. The Law on the Energy Performance of Buildings obliges owners of new or renovated buildings to consider using RES heating and cooling systems.
Technologies	
Statutory provisions	<ul style="list-style-type: none">• Law on the Energy Performance of Buildings (Ēku energoefektivitātes likums);• Construction Law (Būvniecības likums);• Regulation No. 383 (Noteikumi par būvprakses un arhitekta prakses sertifikātu piešķiršanu, reģistrēšanu un anulēšanu)

RES-LEGAL EUROPE – National Profile Latvia

Purpose	The objective of this law is to promote the sustainable use of energy resources and to improve the energy performance of buildings.	This law determines the mutual relations of persons involved in a construction project, as well as their rights and obligations during the construction process.	This Regulation prescribes the procedures by which construction management certificates and professional practice certificates for architects are granted, registered and cancelled.
Relevance for renewable energy	Among other aims, the law supports the installation of RES plants in buildings.	Among other aims, the law imposes rules on the certification of RES installers.	Among other aims, the regulation imposes rules on the certification of RES installers.
